Mobile Access for NHS Fife

The Challenge

NHS Fife were looking for a mobility solution to enable health professionals to access and record key patient information from any site throughout Fife without compromising security.

NHS Fife

NHS Fife serve a population of approximately 280,000 people. They strive to provide the highest quality of care often in the most innovative ways.

Tecnica Limited

Tecnica are an IT solutions provider focused on core solution areas that address business application and information access.

We utilise best of class technologies to deliver these solutions. Our technical staff has the knowledge and expertise to evaluate and understand the business requirements of each customer and propose the appropriate cost effective technology solution.

Tecnica work with both the private and public sector installing, monitoring and managing some of the most complex IT infrastructures across Scotland.

The Business Solution

Tecnica consultants were contracted by NHS Fife for their knowledge and skills to install, commission and support an application server solution based on the Citrix MetaFrame product suite running on Microsoft Windows operating system.

The hardware infrastructure comprises 30 rack mounted L200 servers from Fujitsu Siemens award winning Primergy server range. The racks were shipped as a single unit direct to site ready for installation and commissioning eliminating the need for hardware configuration onsite.

The Results

The deployment of the Citrix Access infrastructure resulted in NHS Fife applications being centrally managed on a scalable and flexible architecture. NHS Fife health professionals are now able to access and record key patient information securely as well as reach other non-critical desktop applications from any site location throughout Fife.

The investment originally to support the Oasis patient record system now delivers all the core health applications as well as standard office applications. The solution capable of supporting in excess of 1000 users continues to deliver.

Case Study

“NHS Fife chose Tecnica to support our Citrix MetaFrame and cluster infrastructure, due to their continued commitment in this technology. Via the investment made in Citrix Subscription Advantage and the added value services from Tecnica, NHS Fife will be upgrading from Citrix MetaFrame Presentation Server 3.0 to Citrix MetaFrame Presentation Server 4.0. The upgrades will future proof the solution and offer further benefits enhancing performance, scalability reliability and desktop security.”
